Understanding the Economic Breeding Index (EBI).

What is EBI?

EBI is a single figure profit index aimed at helping farmers identify the most profitable bulls and cows for breeding dairy herd replacements. It comprises of information on five sub-indexes related to profitable milk production. These are; (i) milk production, (ii) fertility, (iii) calving performance, (iv) beef merit, (v) maintenance, (vi) management and (vii) health.

How do I interpret the Predicted figures for Milk kg, Fat kg, Protein kg, etc.?

We call these Predicted Transmitting Ability figures (PTAs). An animal's PTA indicates the amount of a particular trait an animal is expected to pass on to its progeny relative to the base population. The PTA is equal to half of its own Breeding Value since a cow only passes on half her genes to her offspring. All values on the EBI report are expressed as PTA. Information on bulls (in catalogues, bull search, etc.) is also presented in terms of PTA.

When selecting a team of bulls for your cows you should pick bulls that are higher than the herd PTA for the traits you want to improve. To improve individual cow weaknesses, use the cow PTA to help you determine the best bull to use on her.

EBI Formula

Sub-Index	Trait	Weight	Emphasis	Emphasis
Production	Milk (kg)	-0.09	11%	33%
	Fat (kg)	1.04	3%	
	Protein (kg)	6.64	19%	
Fertility	Calving interval (days)	-12.43	24%	35%
	Survival (%)	12.78	11%	
Calving	Calving difficulty dir (%)	-3.52	3%	9%
	Calving difficulty mat (%)	-1.73	1%	
	Gestation (days)	-7.5	4%	
	Calf mortality (%)	-2.58	1%	
Maintenance	Cow (kg)	-1.65	7%	7%
Beef	Carcase weight (kg)	1.38	5%	9%
	Carcase conformation (units)	10.32	2%	
	Carcase fat (units)	-11.71	1%	
	Cull cow (kg)	0.15	0.8%	
Health	Lameness (%)	-54.26	0.6%	3%
	Mastitis (%)	-77.1	1%	
	SCC (Log•)	-43.49	2%	
Management	Milking duration (seconds)	0.25	2%	4%
	Temperament (units)	-33.69	2%	

Breeding Goals

Spring Profit Team

Create a herd of profitable, problem free cows that fit your system perfectly. All of them have excellent production of fat & protein Kgs, superb health and unrivalled fertility. Deliver high Kgs of milk solids per cow, with a high cent/litre due to the %, have a reduced workload due to optimum health and low maintenance cows. More profit, time and time again.

Fertility Team

Where fertility is the issue this panel of sires is designed to deliver a herd of cows with a higher conception rate to first service, a high 6-week calving rate and a low empty rate. Correct your fertility with this panel, have a low maintenance herd and improve it each subsequent year. These cows should mature and help you achieve 5.5 lactations per cow, resulting in a low replacement rate. Mature cows with longer days in milk due to a higher 6-week calving produce more Kgs of milk solids sold.

Protein Team

Designed to deliver the highest Kgs of solids and achieve the highest milk price cent/ litre in your Co-operative. This panel will help improve your Kgs of milk solids sold from increased % without increasing the milk volume. This increased production is delivered with low maintenance and healthy cows.

ICBF Update the Base Cow used in the EBI

The base cow is the genetic reference point for how all dairy cattle in Ireland are assessed – it was updated last September, moving from a 1995 to a 2005-born base cow. The base cow update reflects improvements made in dairy genetics.

The impact in terms of the genetic component is summarised in Table 1. In addition more data was included for animals in

Table 1

	Milk Sub-Index					Fertility Sub-Index	
	Yield	Fat Kg	Protein Kg	Fat %	Protein %	Calv. Int.	Survival
Change in PTA	-116 kg	-4.9	-6.0	-01/.02	-0.03/.04	+2.8 days	-0.65%
Value of Sub-Index Change (€)	-€29					-€42	
Total Value of EBI Change (€)	-€71						

that evaluation, the exact change in EBI will also depend on what new data is added for the individual animal.

Table 1

A base change should not influence a farmer's decision-making process when it comes to breeding. As always, this process should be:

- Identify the trait(s) which you want to improve in your own herd;
- Use your HerdPlus EBI report to identify the genetic indexes of the trait(s) you wish to improve;
- Select a team of bulls that are on average better than the genetic index for the

trait(s) you wish to improve.

Provided you are selecting bulls with a figure that is better than the herd index, progress will be made for that trait.

What does the New Base Cow produce?

Table 2:

	Base for Production (305 days)			Base for Fertility	
1st Lact.	Milk Yield	Fat/Prot Kg	Fat/Prot %	Calv. Int	Survival
Old Base	5192	196kg/171kg	3.79%/3.30%	404 days	80%
New Base	5743	224kg/195kg	3.90%/3.39%	400 days	82.5%

*305 figures - National Average currently at 252 days

High Conception Rate
Technicians
Exceptional value for
money

A.I on maiden heifers is money well spent

Security at Calving

- Accurate Easy Calving figures
- Heifers hit the ground running
- Will go back in-calf easier

Heifers are your best genetics

They should have higher conception rates
Increases the number of possible replacements

Get your Heifers bred quickly & easily: Simple, reliable sync program

Synchronisation Programme for maiden heifers

Day 0	Introduce vasectomised bull 1 week in advance or Apply scratch cards or crayons
Day 1-7	AI heifers when on heat. Will get 1/3 this week.
Day 7 or 8	Inject PG to all heifers not bred, usually 2/3 of them AI heifers when on heat
Majority will be on heat 48-72 hours post injection. Be extra vigilant at this time.	
Day 18 or 19	Reinject PG to those not bred. Should be very few heifers.
AI heifers when on heat or 72 and 96 hours post 2nd PG injection. Watch for all repeats

aAa Score

513642

CALVING DIFFICULTY

Records Difficulty Reliability
3377 2.1 99%

- Dam currently on 6th lactation and has averaged 4.69% fat and 4.05% protein lifetime with 375 day calving interval.
- Daughters Performing above herd-mates in Irish herds
- Milking Daughters first lactation averaging 433 kgs milk solids (+3 kgs over herd mates) 4.56% Fat and 3.67% protein (herd-mates averaged 4.46% fat and 3.63% protein)
- A Farmer satisfaction sire
- Easy Calving
- High Solids
- Efficient production

Munster's Beef on Dairy Programme

Realise the Potential in Munster Beef

Munster has a specific beef on dairy breeding programme for Angus, Hereford, Belgian Blue, Limousin and Simmental to address the needs of dairy herdowners.

Essential traits in beef sires for dairy herds.

- **Calving Ease.**
 - Importance is that difficult calving's ties up labour time and reduces subsequent fertility.
 - AA2025 & KYA have less than 1% calving difficulty at 99% reliability.
- **Short Gestation.**
 - Most beef sires are used in the 2nd and subsequent services, these late march and April calving cows need a short gestation sire to get increase their days in milk.
 - KYA is 4.52 days shorter than your average bull.
- **Calf quality.**
 - This maximises the price achieved for the young calf.
 - HE2043 & RGZ maximise calf price.
- **Polledness.**
 - Reduces the need for dehorning.
- **Colour.**
 - This maximises the price achieved for the young calf
- **Vigour at birth**
 - This ensures maximum survival rates.

Carcass Trait Requirements for beef animals from dairy herds. Market for calves to Finishers.

With the increasing number of beef calves from the dairy herd and the Angus & Hereford schemes, the Munster beef on dairy programme in addition to the above traits are identifying sires that will deliver the required carcass traits. The challenge is to meet these market specification with easy calving short gestation genetics. Partnerships between the dairy herd producers of calves and the finishers can be developed.

The following are the carcass market specifications.

Conformation of a minimum O= or greater

Fat score of a 2+ to 4=

Carcass weight ideally 280 – 320 kg

Minimum carcass weight for bonus scheme of 220 kg for a heifer and 230 kg for a steer

Maximum carcass weight 380 kg for breed bonus

RGZ is the ideal Angus sire for finishing cattle from the dairy herd. HE2043 and KKO are the ideal Hereford sires for finishing cattle from the dairy herd.

BDGP Scheme. Market for Suckler Replacements.

Suckler herdowners in the BDGP scheme require 20% of their females to be 4 & 5 star for replacement value by October 2018 and 50% to be 4 & 5 star by October 2020.

Beef heifers from the dairy herd are ideal for fulfilling this requirement.

Lm2117 and ZAG are the two Limousin sires, SI2152 the Simmental that are ideal for the production of suckler replacements from the dairy herd.

Milk Recording a **Convenient Service**

- No paperwork required.
- No milk meters or jars required - EDIY
- We will use your own existing equipment - Manual
- Trained technician to help with the EDIY milk recording service.
- Payment by instalments in mid and late lactation.

William Dennehy

Milk Recording enables me to track my SCC and decide which cows to breed my replacements from. I've been Milk Recording for over 21 years, but it was at a recent milk recording workshop that my local Munster advisor pointed out information in my milk recording reports that I was not using. For me the mastitis incidence report and the revamped annual report with the euro value and the top 10 and the bottom 10 cows are invaluable pieces of information. I would highly recommend all farmers to attend milk recording workshops to fully understand and get the maximum benefit from your reports.

Heat Detection Aids

Increase live births & farm profitability

Be more productive on your farm

Moocall monitors your herd so you can spend your time doing the things that matter most on your farm. Our motion sensor technology accurately detects the onset of calving notifying you approx. 1hr prior to calving. No need to keep checking on that heifer, we'll let you know when she needs you.

**Call your local Munser Rep
or Technician to order**
